

NGUYEN PHUC THANH

Hanoi, Vietnam | 033 281 2606 | thanhng224@gmail.com | <https://github.com/ThanhNg224>

SUMMARY

Mobile Developer (**Flutter** & **Android**) with hands-on **Flutter** production experience spanning fintech SDKs, credit-scoring apps, and in-app mini-app/WebView hosts at **Kalapa** alongside partner banks. Previously at eUp, contributed to two large-scale language-learning apps – **HeyJapan** (Android) and **HeyKorea** (Flutter).

Portfolio: thanhng224.github.io/react-portfolio

EDUCATION

Hanoi University of Science and Technology HUST

B.Sc. in Multimedia Engineering (Advanced Program)

Hanoi, Vietnam

2021 – 2025

LICENSES AND CERTIFICATIONS

IELTS Academic - 7.5

Issued by IDP Education Co., Ltd

September. 2024

TECHNICAL SKILLS

Cross-platform: Flutter (Dart) – Bloc, Riverpod, SDK/plugin development; React Native

Android: Kotlin, Java; Jetpack (ViewModel, Navigation, Room, DataStore, WorkManager); MVVM & Clean Architecture; Coroutines/Flow; Hilt

Networking & Data: Retrofit, OkHttp, REST APIs

Web/Backend: ReactJS, NextJS, NodeJS, Flask

Integrations: Firebase (Analytics, Crashlytics, Remote Config, FCM), Push Notification, Payment Gateway

Tools: Git, Gradle, Android Studio

EXPERIENCE

Kalapa JSC

Hanoi, Vietnam

Mobile Developer (Android & Flutter) Fintech SDK (eKYC & Risk Scoring)

June 2026 – Present

- Develop and maintain Android **eKYC SDKs** integrated into partner banking apps, including **Shinhan Bank** and **VPBank**.
- Build a **Flutter SDK** for behavioral risk scoring: capture in-app user interaction data (touchpoints, navigation flows) and combine it with data from other sources for server-side credit/loan evaluation, using **Bloc**, **Provider**, and **Riverpod** for state management.
- Develop a **Flutter** demo application embedding an in-app mini-app (WebView-based) that renders a marketing web experience natively without requiring an external browser, integrated via **RESTful APIs**.
- Design and build standardized **host/demo applications** (Android & Flutter) to test, validate, and showcase SDK modules for partners and internal QA, following **MVVM + Clean Architecture** for maintainability and easy integration reference.
- Integrate **Firebase** (Analytics, Crashlytics, FCM), **Push Notification**, and **Payment Gateway** flows across Android and Flutter SDK/host apps, collaborating directly with partner banks' technical teams to resolve device- and platform-specific compatibility issues.

eUp Technology Joint Stock Company (eUp Group)

Hanoi, Vietnam

Mobile Developer HeyJapan (Android) & HeyKorea (Flutter) Language Learning Apps

April 2025 – May 2026

- Contributed core features to a **large-scale consumer application** (HeyJapan) using **Kotlin** and **MVVM + Clean Architecture** in a multi-module setup.
- Implemented learning flows, question engines, and dynamic UI with optimized performance across a wide range of Android devices, including low-end hardware.
- Also contributed to **HeyKorea**, the **Flutter** counterpart of HeyJapan with a similar feature set, using **Bloc** for state management alongside the core Android role.
- Integrated production systems including ads monetization, analytics tracking, and remote configuration for controlled feature rollout.

ATIN Advanced Technology Innovations

Hanoi, Vietnam

Fullstack Developer (Mobile Focus Android & Flutter)

March 2024 – April 2025

- Developed Android applications for **biometric face-terminal systems**, integrating **camera**, **NFC**, and **face recognition SDKs** with real-time **Coroutines**-based processing.
- Worked across legacy **Java/XML** and modern **Kotlin/Jetpack** stacks (ViewModel, Navigation, Room, Hilt), ensuring smooth migration to **MVVM + Clean Architecture**.
- Built a standalone **Flutter** app and an internal demo tool using **Bloc/Riverpod**, with **RESTful API**, **Firestore**, and **Push Notification** integration.
- Delivered production solutions for enterprise clients (**Viettel**, **SunGroup**), collaborating with backend and UI/UX teams to build stable, real-world deployed systems.

FPT Software (Training Internship)

Hanoi, Vietnam

C++ Training Program

October 2023 – March 2024

- Completed an intensive C++ training program covering algorithms, data structures, and OOP fundamentals.
- Gained practical experience in object-oriented programming and collaborative software development.

PROJECTS

Kalapa Behavior Score Flutter Credit Scoring Demo App | *Flutter, Riverpod (Generator), go_router, Freezed, Dio, MethodChannel*

- Built a Flutter client showcasing the **Kalapa Behavior Score SDK** in a simulated consumer-loan flow, using **Feature-First Clean Architecture** (presentation/domain/data/core) for real-time on-device credit/risk scoring.
- Used **Riverpod** (Generator) for state management/DI, **go_router** for navigation, and **Freezed/fpdart** for immutable models and functional error handling.
- Bridged to the native Android Behavior Score SDK via **MethodChannel**, with a mock data source fallback for iOS/desktop, and implemented permission flows for on-device telemetry collection.
- Shipped dev/prod build flavors with obfuscated, minified release builds (R8, split debug symbols) for Google Play distribution.

LOS Miniapp Host Flutter WebView Loan-Registration App | *Flutter, Riverpod (Generator), go_router, InAppWebView, Dio, Freezed*

- Built a Flutter host app embedding a partner mini-app (FE CREDIT loan registration) via an in-app **WebView** instead of handing off to an external browser, on **Feature-First Clean Architecture** (presentation/domain/data/core).
- Used **Riverpod** (Generator) for type-safe dependency injection and state management, and **go_router** for declarative routing and deep linking.
- Implemented structured logging with data redaction, **fpdart**-based functional error handling, a Material 3 design system, and English/Vietnamese localization.

Viettel EID/Passport Verification App Android Kiosk Solution | *Kotlin, MVVM, Jetpack, ML Kit, REST API*

- Developed an Android kiosk application in **Kotlin** using **MVVM + Clean Architecture**, deployed on Joyusing Z10S Pro devices with robust lifecycle handling and hardware integration.
- Integrated manufacturer SDKs for camera, NFC reader, and biometric modules, implementing asynchronous capture/processing flows with **Coroutines** for smooth and stable real-time operations.
- Implemented a full identity verification pipeline: document capture, MRZ OCR, ML Kit image preprocessing, NFC chip reading, and face-matching via Face Engine API.
- Connected with Viettel backend systems using **Retrofit** and secure REST APIs, and integrated **VNPAY sandbox QR payment** along with digital signing modules for transaction validation.

eKYC Android SDK Multi-Module Architecture Refactor | *Kotlin, Gradle Multi-Module, CameraX, ML Kit, Retrofit, Coroutines, CI/CD*

- Split a monolithic Android SDK into a multi-module **Gradle** project with custom **convention plugins** (build-logic) and a centralized **version catalog** (libs.versions.toml).
- Built capability modules for **CameraX**, document capture with **ML Kit** (face detection, text recognition/OCR, barcode scanning), on-device liveness detection, and **NFC** chip reading, using **Kotlin Coroutines**, **AndroidX Lifecycle** (ViewModel/LiveData), and **Retrofit/OkHttp**.
- Enforced a one-directional module dependency graph (no cyclic dependencies) via a custom Gradle task inspecting **api/implementation** project edges, and set up **Maven Central** publishing (Dokka API docs) with **GitLab CI/CD** for versioned module releases.
